Understanding Core FS Solutions in the FM Marketplace

Agencies select and implement FM QSMO approved Core FS solutions from the [FM Marketplace](#). The Core FS Baseline Solution embeds federal standards and common capabilities, while additional configurations, enhancements, and extensions can support usability and specific requirements.

Core FS Solution Layers

Core FS Agency Solution

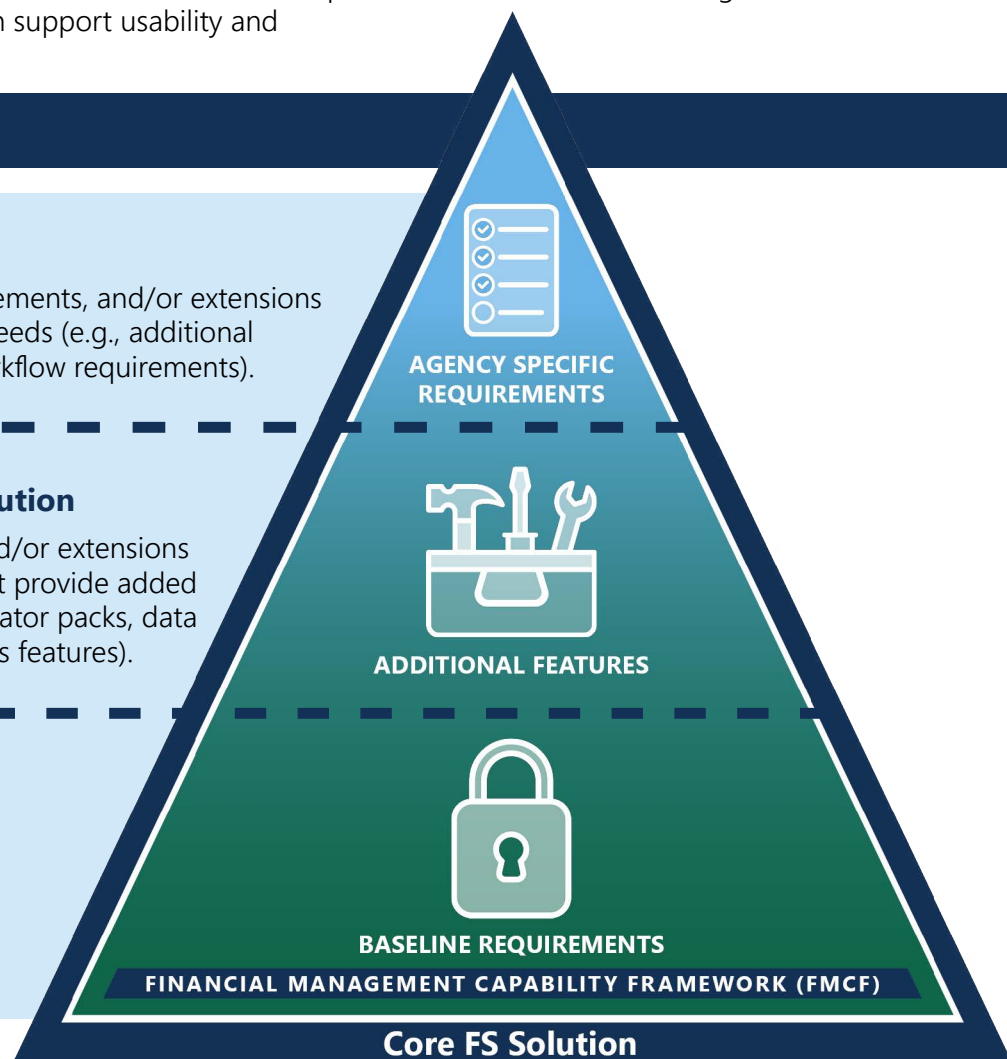

Additional configurations, enhancements, and/or extensions to meet agency mission-specific needs (e.g., additional interfaces and reports, unique workflow requirements).

Core FS Baseline Plus (+) Solution

Configurations, enhancements, and/or extensions beyond baseline requirements that provide added features and usability (e.g., accelerator packs, data conversion templates, data analysis features).

Core FS Baseline Solution

Compliance with federal financial management standards and other common capabilities defined in the FMCF.

How are configuration needs determined?

Agencies can assess current capabilities of Core FS solutions, agency-specific requirements, and anticipated needs. Additional configurations, enhancements, and/or extensions may be identified as needed to define the Core FS Agency Solution, with proposed requirements reviewed by the FM QSMO to ensure alignment with the FMCF. Core FS providers, which may be system integrators/partners, can determine specific combinations of software configuration, enhancements, and/or extensions required to meet the defined needs.

How are Core FS Solutions implemented?

Agencies have discretion in both approach and model when obtaining and implementing Core FS Solutions from the Marketplace. For example, agencies could buy a baseline solution only and separately obtain implementation/integration support.
